

Redact-It<sup>®</sup> is a cost-effective redaction tool with a seamless integration to the Kofax<sup>®</sup> Capture<sup>®</sup> 8.0 intelligent capture system.

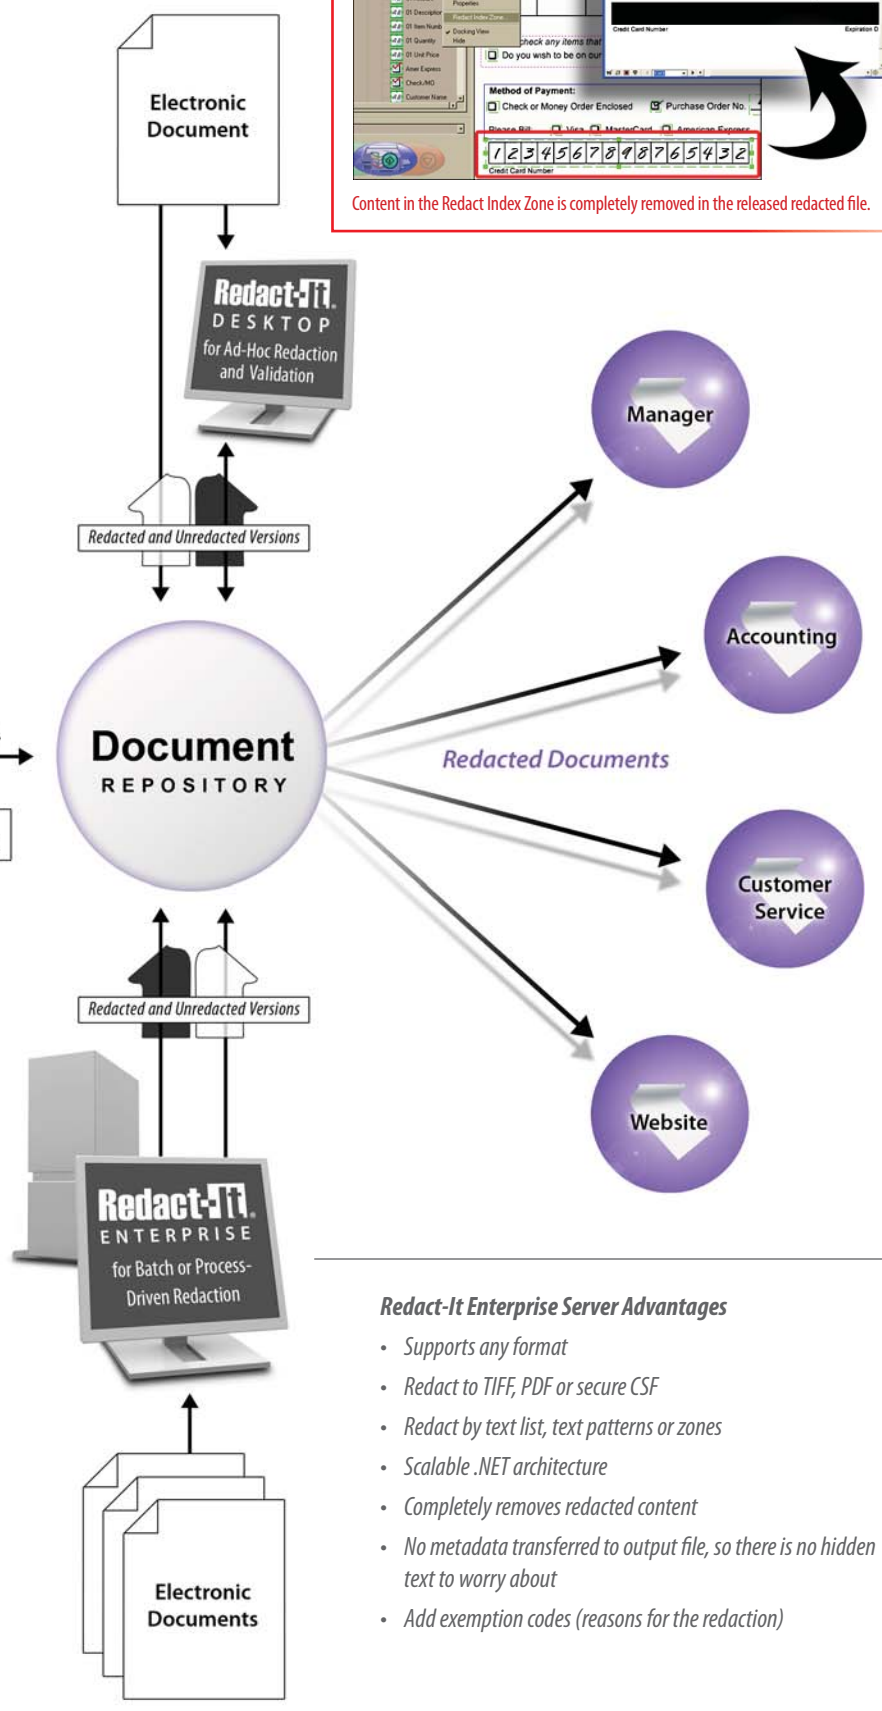

Redact-It for Kofax<sup>®</sup> works from within the Capture<sup>®</sup> application to provide convenient zone-based redaction as part of the Kofax batch process. It can redact just the image zone or the zone and OCR text. Redact-It completely removes redacted content from the output file, so it is irretrievable. Redact-It then releases both unredacted and redacted versions of the file to the specified location in the release script: repository, website, network location or workflow process.

Content in the Redact Index Zone is completely removed in the released redacted file.

- Automated zone redaction as part of Kofax batch process
- Completely removes redacted text
- Seamless integration into Capture<sup>®</sup> 8.0
- Works with images or OCR text
- Validate redactions before finalizing redacted document version

## Redact-It Enterprise Server

### Redaction for stored documents

Add Redact-It Enterprise Server to batch process all your stored documents. Redact-It Server can be integrated to your ECM system for automated redaction as part of you workflow processes, or it can simply monitor a directory (including subfolders).

### Redact-It Enterprise Server Advantages

- Supports any format
- Redact to TIFF, PDF or secure CSF
- Redact by text list, text patterns or zones
- Scalable .NET architecture
- Completely removes redacted content
- No metadata transferred to output file, so there is no hidden text to worry about
- Add exemption codes (reasons for the redaction)
